**Analisis Asuhan Keperawatan Pada Tn.T Dengan Stroke Hemoragik Yang Di
Berikan *Evidence Based Practice* Terapi AIUEO Untuk Meningkatkan Gangguan
Komunikasi Verbal Di Ruang non Bedah Saraf RSUP Dr.M.Djamil Padang
abstrak**

Pendahuluan : stroke hemoragik yaitu stroke yang stroke ini terjadi karena perdarahan atau pecahnya pembuluh darah ke otak baik subaracnoid, intraserebral maupun karena aneurisma. **Tujuan:** Mampu melakukan analisis asuhan keperawatan pada Tn.T dengan stroke hemoragik dan *Evidence based practice* terapi AIUEO untuk meningkatkan gangguan komunikasi verbal. **METODE** : Karya ilmiah Ners ini menggunakan desain study kasus. **Hasil** : Pada pengkajian Tn.T dengan GCS E4M6V5 dan masih mengalami kesulitan dalam bicara , tampak klien mengalami kesulitan saat batuk, Kelemahan anggota gerak , penurunan kekuatan otot, serta pasien tidak dapat menggerakkan anggota gerak dan hanya berbaring di tempat tidur. **Kesimpulan** : Dari data yang di dapatkan pada pengkajian didapatkan masalah Gangguan komunikasi verbal b.d gangguan neuromuskuler yang mengakibatkan kesulitan dalam berkomunikasi. Sehingga dari masalah keperawatan tersebut penulis melakukan analisis EBN terapi AIUEO untuk meningkatkan kemampuan komunikasi verbal pada Tn.T. Terapi ini dapat diterapkan untuk meningkatkan kemampuan komunikasi verbal pada penderita stroke hemoragik.

Analysis of Nursing Care for Mr. T with Hemorrhagic Stroke Who Was Given Evidence Based Practice AIUEO Therapy to Improve Verbal Communication Disorders in a Non-Neurosurgical Room Dr. M. Djamil Hospital Padang

abstract

Introduction: hemorrhagic stroke, namely stroke in which this stroke occurs due to bleeding or rupture of blood vessels to the brain, both subarachnoid, intracerebral or due to an aneurysm. **Objectives:** Be able to perform an analysis of nursing care on Tn.T with a hemorrhagic stroke and Evidence based practice of AIUEO therapy to improve verbal communication disorders. **METHODS:** This scientific work by Nurses uses a case study design. Results: At Tn.T's assessment with GCS E4M6V5 and still having difficulty speaking, it appears that the client has difficulty coughing, weakness of the limbs, decreased muscle strength, and the patient cannot move the limbs and only lies in bed. **Conclusion:** From the data obtained in the study, it was found that there were problems with impaired verbal communication related to neuromuscular disorders which resulted in difficulties in communicating. So from this nursing problem the author carried out an EBN analysis of AIUEO therapy to improve Mr.T's verbal communication skills. This therapy can be applied to improve verbal communication skills in hemorrhagic stroke sufferers.
