Hubungan Dukungan Keluarga dengan Pelaksanaan *Continuity Of Care* pada Pasien Hipertensi di Puskesmas Andalas Padang

xi + 91 Halaman + 3 Skema + 5 Tabel + 10 Lampiran

ABSTRAK

Penyakit hipertensi merupakan penyebab utama kematian di seluruh dunia terutama pada orang dewasa yang berusia 30-79 tahun diperkirakan sebanyak 1,28 miliar. Pada provinsi Sumatera Barat angka kejadian di Kota Padang penduduk usia ≥ 15 pada tahun 2021 terdapat kasus hipertensi 51.360 orang, dan yang dilayani dengan diagnosa hipertensi sebesar 31.5% orang. Pada tahun 2021, 40 dari 100 penduduk indonesia yang melakukan *continuity of care* dengan presentase sebesar 105,04%% (RS pemerintah 5,24%, RS swasta 5,50%, Praktik Dokter/Bidan 31,55%, Klinik/Praktek dokter bersama 39,57%, Puskesmas/Pustu 17,87% dan lainnya 2,62%) . Tujuan penelitian ini untuk mengetahui hubungan dukungan keluarga dengan pelaksanaan *continuity of care* pada pasien hipertensi di Puskesmas Andalas Padang. Metode penelitian dengan desain *cross sectional*. Pengumpulan data telah dilaksanakan di Puskesmas Andalas dengan menggunakan kuesioner dan waktu penelitian dilakukan pada bulan 26 Juni – 1 Juli 2023, dengan sampel 79 responden cara pengambilan sampel teknik *accidental sampling*. Hasil penelitian analisa univariat didapatkan distribusi frekuensi dukungan keluarga pada pasien hipertensi lebih dari separoh yaitu (82.3%), distribusi frekuensi lebih dari separoh yaitu pelaksanaan *continuity of care* (89.9%). Dan pada hasil analisa bivariat menunjukkan ada hubungan dukungan keluarga baik dengan pelaksanaan *continuity of care* dengan (*pvalue*=0,000 ($p < 0,05$)). Kesimpulan pada penelitian ini ada hubungan dukungan keluarga baik dengan pelaksanaan *continuity of care* pada pasien hipertensi di Puskesmas Andalas. Diharapkan koordinasi *continuity of care* antara tempat pelayanan kesehatan dengan pelayanan perawatan rumah (*home care*) atau keluarga tentang perawatan pasien melalui perawat perantara pada pasien hipertensi.

Kata Kunci : *Continuity Of Care*, Dukungan Keluarga

The Relationship between Family Support and the Implementation of Continuity of Care for Hypertension Patients at the Andalas Health Center, Padang

xi + 91 Pages + 3 Schemes + 5 Tables + 10 Appendices

ABSTRACT

Hypertension is the main cause of death worldwide, especially in adults aged 30-79 years, estimated at 1.28 billion. In the province of West Sumatra, the incidence rate in Padang City for residents aged ≥ 15 in 2021 is 51,360 cases of hypertension, and 31.5% of people served with a diagnosis of hypertension. In 2021, 40 out of 100 Indonesian residents will carry out continuity of care with a percentage of 105.04%% (government hospitals 5.24%, private hospitals 5.50%, doctor/midwife practices 31.55%, clinics/doctor practices with 39.57%, Puskesmas/Pustu 17.87% and others 2.62%). The aim of this research is to determine the relationship between family support and the implementation of continuity of care for hypertensive patients at the Andalas Padang Community Health Center. Research method with cross sectional design . Data collection was carried out at the Andalas Health Center using a questionnaire and the research was carried out in the months 26 June - 1 July 2023, with a sample of 79 respondents using the accidental sampling technique . The results of the univariate analysis showed that the frequency distribution of family support for hypertensive patients was more than half, namely (82.3%), the frequency distribution was more than half, namely the implementation of continuity of care (89.9%). And the results of the bivariate analysis show that there is a good relationship between family support and the implementation of continuity of care with (p value = 0.000 ($p < 0.05$)). The conclusion in this study is that there is a good relationship between family support and the implementation of continuity of care for hypertensive patients at the Andalas Health Center. It is hoped that there will be coordination of continuity of care between health service locations and home care services or families regarding patient care through intermediary nurses for hypertensive patients.
